## Top 5 populated countries

Wikipedia List Item Map of countries and territories and territories per population in 2019 (The DHELDER, the largest population) This is a list of countries and dependencies by population. It includes sovereign states, with the inclusion within the list that is mainly based on the ISO 3166-1 standard. For example, the United Kingdom is considered a single entity, while the constituent countries of the Kingdom of the Netherlands are considered separately. Furthermore, this list includes certain states with limited recognition not found in ISO 3166-1. Furthermore, given as a percentage, it is the population of each country with respect to the world's population, which the United Nations estimates 7.9 billion today. Method See also: list of countries and dependencies by the population used in this chart are based on the most up-to-date estimate or projections [1] from the National Census Authority, if available, and usually they are rounded off. Where the updated national data are not available, the figures are based on projections for 2021 by the demographic division of the United National Department of Economic and Social Affairs. [2] Because the compiled figures are not collected at the same time in each country, or at the same level of precision, the resulting numerical comparisons can create misleading conclusions. Furthermore, the addition of figures of all countries are considered as part of the affected sovereign states. Not included are other entities, such as the European Union, [A] that were not sovereign and independent territories that have no permanent population notes: a numbered rank is assigned to the 193 United Nations Member States, in addition to the two observer states to the United Nations General Assembly. The dependent territories and the constituent countries that are parts of sovereign states are not awarded a number and the constituent countries that are parts of sovereign states are not awarded a number.
